

Global Volcano Model (GVM)

GVM is a growing international network that aims to create a sustainable, accessible **information platform** on volcanic **hazard and risk**.

GVM will provide **systematic evidence, data and analysis** of volcanic hazards and risk on **global, regional and local scales**, and will develop the capability to **anticipate future** volcanism and its consequences.

GVM: Overview of progress

Three main focuses:

- To build reliable databases
- GAR15 report
- Support VOBP2 by integrating resources
